Dear Editor,

I am writing this letter to you in order to bring light toward the special issue of poultry production in Pakistan. There are several diseases in poultry which causing stress in poultry production. Some are viral diseases which don’t have treatment [1, 2, 3, 4, 5]. Only vaccination and biosecurity measures can prevent disease. There are some viral diseases which are effecting poultry badly, Newcastle Disease, Infectious Bronchitis, Marek’s Disease, Infectious Chicken Anemia, and Infectious Bursal Disease. Some are bacterial diseases which can be treated through antibiotics [6, 7, 8, 9]. There are some bacterial diseases which are effecting poultry badly, Infectious Coryza, MG, Salmonella diseases are some major bacterial disease. There are some Protozoal diseases which are effecting poultry production and these can be treated through anti-protozoal drugs. Coccioidosis is one of main potozoal disease. Some fungal diseases are also effecting poultry for their control anti-fungal medicine could be used. There are some major fungal diseases

Myctoxin
Aspergillus infection [10]

Effect of Covid-19 on Poultry Industry
Since 2019 Covid-19 was observed in a patient in china [11-16]. It became a sever issue as it effect all industries and poultry industry is very badly effected by covid-19 as it decrease the marketing and export.

CONCLUSIONS

The Major aim to write this letter to bring light toward major issues of poultry in Pakistan so people can understand these issues and can make possible strategies regarding these diseases to prevent themselves from loss.
